

Public Path Surveys

Do you need a survey?

To properly manage a path network you need to know what you have got, where it is and what condition it's in. Without that information at your fingertips you can only react, not manage.

- ▶ **How many** items of furniture are there on your path network?
- ▶ **What budget** do you need to maintain the furniture assets in its current condition?
- ▶ How many **sub-standard items of furniture** and other **path problems** are 'out there' on your network?
- ▶ **What will it cost** to address those problems? If you don't have that budget, have you prioritised them in a defensible manner?
- ▶ When was each **path last inspected** and do you have accessible records of survey results and follow up actions?

If you can answer these questions then congratulations, if not, then you may need to think about a path survey!

What are the benefits?

Undertaking an inventory and condition survey allows you to move away from unplanned and reactive approaches to management to pro-active and planned management. This offers many benefits:

- ▶ Provides sound data to generate **rational and justified budget bids**
- ▶ Ensures **cost effective and defensible deployment of limited resources**
- ▶ Enables improved **asset management and valuations**
- ▶ Assists in **liability management**

What can exeGesIS offer?

exeGesIS has undertaken 44,000km of public path surveys across the UK. That's the equivalent of walking around the equator!

See overleaf for a breakdown of our survey services and cost.

exeGesIS survey services

- ▶ A **planning meeting** at your offices to establish your information requirements and to review survey methodology
- ▶ An optional **pilot survey** where authority staff & surveyors work together to test and refine the approach
- ▶ **Survey preparation** - we will customise our 'Path Surveyor' application to meet the precise needs of each survey
- ▶ **Fieldwork** - with as many surveyors as needed to complete your survey.
- ▶ **Data analysis and reporting** - including asset valuations, defects reports, BVPI, scenario budgeting.
- ▶ **Migration of data** into your CAMS or other agreed data management system or GIS

Typical report outputs

As well as importing the survey data into your CAMS or any other management system, we will provide the following reports:

- ▶ A detailed **asset management inventory** with maps and photos
- ▶ An **asset summary** with graphs and tables
- ▶ A **furniture condition summary** with graphs and tables
- ▶ A detailed **issues / defects report** with maps and photos
- ▶ An **issues / defects summary** with graphs and tables
- ▶ An **asset valuation**, based on standardised, client definable costs
- ▶ A **defects cost report**, based on standardised, client definable costs
- ▶ An **annual maintenance budget**

What does it cost?

For surveys commissioned in 2013 all of the above, including expenses, is offered at **£30 per km**.

For shorter networks the per km cost will be slightly higher and conversely for a longer network the cost per km will be a bit less.

If don't have our software yet, then we will also provide **one free CAMS licence**.
